

MPA

Multi-annual Partnership Agreement (MPA): Contributing to strengthening public and community health systems and services, and empowering individuals and organisations.

Despite historic advances over the last few years, West Africa is one of the most fragile regions in the world when it comes to social and health indicators, particularly when it comes to gender inequality.

This worrying situation is due to an accumulation of complex factors: multiple chronic crises (political, climatic, epidemic) that the region is going through and that are contributing to the further weakening of health systems, as well as a set of socio-cultural factors that make certain categories of the population particularly vulnerable.

Against this backdrop, strengthening healthcare systems and empowering communities is essential to fostering the resilience of populations and equitable access to quality healthcare, and thus contributing to sustainable improvements in people's health.

KEY DATA

Project duration: 4 years

Beneficiaries: Solthis

Source of funding : AFD, The Initiative

Partners: Fondation Espoir Guinée, Network of HIV Positives, Lafia Matassa, RAES, Enda santé, Equipop, LARTES-IFAN

Countries: Côte d'Ivoire, Guinea, Niger, Senegal, Sierra Leone

OBJECTIVES

General objective: The aim of the programme is to strengthen public and community health services and systems in the target countries in order to increase their resilience, make them more accountable to users and encourage the roll-out of user-centred services. In this way, it aims to strengthen human resources in health and empower users, particularly women, young people and people living in vulnerable situations.

It also responds to global health issues by exploring and operationalising new themes such as hepatitis B and One Health, which are key for the sub-region and in the global context of development aid.

Lastly, the programme includes a cross-cutting theme aimed at strengthening and sustaining the Solthis intervention model, so that it can continue to meet the priority needs and demands of West African countries.

EXPECTED RESULTS

-  more efficient, accountable and user-centred health services;
-  Increased empowerment of communities and partner civil society organisations;
-  improved national and international health policies;
-  the consolidation and sustainability of the Solthis intervention model.
